Course: Data Structures (CSE CS203A)
Assignment II: Array Selection Sort
Student Worksheet Companion

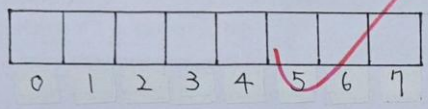
100

Student ID: 113141117 Student Name: 魏允鴻

A1. Array Representation Drawing

Instructions: Draw a visual representation of an array structure that can hold 8 integers. Include:
Array cells/boxes
Index labels (0 through 7)
Clear indication of array bounds

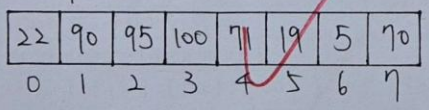
Complete your populated array here:



A2. Populate Array with Given Integers

Instructions: Fill the array structure you drew in A1 with the given integers: 22, 90, 95, 100, 71, 19, 5, 70
Add the following annotations:
Array name (e.g., "Array A")
Index numbers below each cell
Value labels above or inside each cell

Array A:



A3. Selection Sort – First Three Steps

Instructions: Show the detailed execution of the first three iterations of selection sort. For each step, track the array state, identify the minimum element, record any swaps performed, and show the resulting array.

Step1 (i = 0):

Array before step (with indices)
[22] [90] [95] [100] [71] [19] [5] [70] 0 1 2 3 4 5 6 7
Searching range: indices 0 to 7

Minimum element found: Value = 5, Index = 6
Swap performed: Index 0 <-> Index 6
(Circle YES or NO): (YES) / NO
Array after step (with indices)
[5] [90] [95] [100] [71] [19] [22] [70]   0 1 2 3 4 5 6 7

Step2 (i = 1):

Array before step (with indices)
[5] [90] [95] [100] [71] [19] [22] [70]   0 1 2 3 4 5 6 7
Searching range: indices 1 to 7
Minimum element found: Value = 19, Index = 5
Swap performed: Index 1 <-> Index 5
(Circle YES or NO): (YES) / NO
Array after step (with indices)
[5] [19] [95] [100] [71] [90] [22] [70]   0 1 2 3 4 5 6 7

Step3 (i = 2):

Array before step (with indices)
[5] [19] [95] [100] [71] [90] [22] [70]   0 1 2 3 4 5 6 7
Searching range: indices 2 to 7
Minimum element found: Value = 22, Index = 6
Swap performed: Index 2 <-> Index 6
(Circle YES or NO): (YES) / NO
Array after step (with indices)
[5] [19] [22] [100] [71] [90] [95] [70]   0 1 2 3 4 5 6 7
